

Stock consumers

SpringBoard, Camera, Photos; original frameworks

Original IOKit providers

MMC / AES, display, touch / power, H1ISP / JPEG

Adapted original XNU

AArch32; exact-build guards and bindings

Resident EL2 compatibility / reset

Selective legacy handling; drained reset route

A64 hardware / Cortex-A53

Physical execution, MMIO, DMA, panel and sensor

Boot-time preparation

Tow-Boot / TF-A, then pre-XNU NuttX panel initialization and selector

Recovery after reset

RTC route to separate Jumpdrive Linux; fresh media checks

Boot-time initialization, resident runtime and recovery have different lifetimes.

Ordinary instructions execute as AArch32 on A53.
